Professional Summary

Computer Engineering student with strong experience in software engineering, full stack development, app development, ML/AI tooling, operating systems, and game development. Skilled in **Python**, **Java/JavaScripts**, **C++**, **C**, **Kotlin**, **Flutter**, **SQL**, **Firebase**, **HTML/CSS**. Completed 30+ GitHub software/hardware projects including mobile apps, web systems, ML tools, and OS level programs.

Education

BASc in Computer Engineering, uOttawa (Expected 06/2026)

- Term Dean's List, Honor Roll, UOSU Scholarship for Innovation in Sustainability (2024).
 - Relevant coursework: Android Studio, Idle/Google Colab, VS studio Code, KNN algorithms, .
-

Skills

- Languages: **C**, **C++**, **Python**, **Java**, **Kotlin**, **HTML-CSS**, **SQL-MySQL**, **PostgreSQL**
 - Tools: **Android Studio**, **VS Code**, **Web flow**,
 - Systems: **GitHub/GitLab Systems**, **Operating Systems**, **Virtual Machines**, Hypervisors, Embedded Systems Other: Debugging with GDB, scripting in Python, QEMU (emulator)
-

Projects

- **Web Design – Match-Up Competition:** Designed and developed websites using **JavaScript**, **HTML**, **React** and **CSS** for a startup.
 - **Game Development – uOttawa Dev Club:** Created a maze game in **UPBGE** and **Pygame**, including multiplayer, hidden traps and timer logic.
 - **App Development – Rentron:** Built full-stack app connecting landlords, renters, and property managers with Firebase-secured login all in Java.
 - **Match-Up Web IEEE Competition:** Designed websites using **HTML/CSS/Java**, deployed using **AWS**, created a database **AWS RDS (PostgreSQL and MySQL)**.
 - **MAI – Personal AI Assistant:** Integrated **OpenAI**, **Gemini**, **Pinecone APIs**, used **Lang Chain** to build embedding pipelines + memory search.
 - **Drone Sound Detection System(UDD):** Built ML spectrogram classification pipelines, trained a ML model from scratch, tested with an accuracy of 83.7%. Created UI for better visualization. (Note all project are seen on the website).
 - **MazeLock Multiplayer Server/Client:** Developed Python networking system for shared object game state.
-

Work Experience

Intern, Snappy Techs (08/2021 - 01/2023)

- Assisted staff in technical projects, gaining hands-on experience in software and hardware.
- Tested numerous devices for errors. Including overstressing in order to test durability.

Web developer, Qinvst(09/2024 – 12/2024)

- Created new website templates, edited old websites added new frameworks, designs,etc.

Achievements

- 1st place: Eco Sorter (Self-Recyclable Bin) | 2nd place: Hack the Hill FPGA Project | 2nd Place WIE x IEEE
- IEEE Member • CPR/AED • Six Sigma
